

FRAUD GRAPH EVIDENCE REPORT

CYBER CRIME LINK ANALYSIS & MONEY LAUNDERING INVESTIGATION

Executive Summary: This document contains formal evidence compiled by the Fraud Shield Network Analysis Engine. A transaction ledger was analyzed to build a directed graph showing financial flow. Using degree-centrality profiles, rapid loop checks, and community detection (Louvain), specific accounts have been flagged as showing anomalous behavior consistent with **money mule operations** and **pooling hubs**. Action is recommended to freeze critical accounts listed below.

Investigation Parameter	Observed Metrics
Total Investigated Accounts	24 nodes
Mule / Critical Accounts Flagged	0 nodes (Score >= 70%)
High-Risk Accounts	5 nodes (Score 40-70%)
Suspicious Money Chains Detected	4 chains

Risk-Ranked Suspect Accounts

Account ID	Risk Score	Risk Level	In/Out Volume (Rs)	Anomaly Signature
203	60.0%	HIGH RISK	In: 250,000.0 Out: 249,000.0	Mule Activity (Rapid funds cycling), High Liquidity Draining (Mule profile)
888	55.0%	HIGH RISK	In: 79,000.0 Out: 0.0	Hub Account (5 incoming victims), Temporal Transaction Burst
201	45.0%	HIGH RISK	In: 80,000.0 Out: 79,000.0	Mule Activity (Rapid funds cycling)
202	45.0%	HIGH RISK	In: 50,000.0 Out: 49,500.0	Mule Activity (Rapid funds cycling)
305	45.0%	HIGH RISK	In: 2,500.0 Out: 1,200.0	Mule Activity (Rapid funds cycling)
500	35.0%	SUSPICIOUS	In: 262,000.0 Out: 0.0	Hub Account (4 incoming victims)
900	15.0%	SUSPICIOUS	In: 377,500.0 Out: 0.0	Incoming Hub tendency
101	0.0%	LOW RISK	In: 0.0 Out: 45,000.0	Normal account activities
104	0.0%	LOW RISK	In: 0.0 Out: 30,000.0	Normal account activities
105	0.0%	LOW RISK	In: 0.0 Out: 80,000.0	Normal account activities
102	0.0%	LOW RISK	In: 0.0 Out: 62,000.0	Normal account activities
103	0.0%	LOW RISK	In: 0.0 Out: 125,000.0	Normal account activities

Money Laundering Rapid Cycling Details

Rapid cycling represents automated or manual split-second routing of funds where an account immediately drains incoming funds to a third account, acting as a classic money-mule layering step to evade detection. The following paths were flagged:

Source Acct (Victim/Sender)	Mule Acct (Layering)	Destination Acct (Pooling)	Time Gap (Minutes)
105	201	900	5.0 min
106	202	900	12.0 min
107	203	900	2.0 min
304	305	306	157.0 min
